

Interactive exercise 1

Walking the web

For what do you or your organisation need ecosystem services?

Walking the web

- Questions on the floor
 - Arrows with the answers
 - Follow them
 - Write down your answers on the flap over
-
- Happy exercise !

Interactive exercise II

Selecting a tool and guidance documents

Selecting a guidance document or model –
is like buying a car -know what you want

Some issues to consider

- 1) Do we want to be able to use the tool in house and if so which expertise do we have? (complex tool/ easy to use tool) ?
- 2) Do we have budget to acquire a tool (can it be downloaded /ordered either for free or for a license)?
- 3) Which ecosystem services are we interested in (which and which type/ number of ecosystem services does it distinguish: Providing (P), Cultural (C) Regulating (R)?
- 4) Do we want to value or monetarize services?
- 5) Do we want to show the results in maps or not and do I then have also the data needed for the model
- 6) Do we want to use it to review future scenario's or planning options or not?
- 7) Do we want to use the tool in a participatory planning process?

Short exercise

- Paper on the table They contain some of the questions mentioned above
- Choose for each question your preference
- See the options and look which models scores best
- Write down your top 3 on the paper
- Transfer you top 3 on the flap-over
- Based on your preferences we will show you some of the models

No use of maps	WWF Guidance TESSA Tool for valuing ecosystem services
